DCB GROUP ENVIRONMENTAL POLICY

The DCB Group of companies operate at Westinghouse Road, Trafford Park. Our activities include print management, warehousing and distribution and in house litho, Creative/designing, digital and large format printing. DCB Group controls all environmental aspects of our site and operations with consideration to all interested parties. The group controls and manages risk to achieve continual improvement of our environmental performance and to prevent pollution.

DCB Group is committed to:

- Maintaining an environmental management system which conforms to ISO 14001:2015
- Taking environmental issues into consideration when making core business decisions, including investment, innovation and operational or working practises
- Managing and monitoring its significant environmental aspects
- Compliance with all applicable environmental legislation and with other requirements to which the organisation subscribes which relate to its environmental aspects. This is achieved by maintaining a register of legislation as part of our environmental management system as well as completing periodic compliance audits
- Purchasing where practicable, environmentally superior products and materials from suppliers who have demonstrated a commitment to good environmental practices, particularly from suppliers certified to ISO 14001and/or FSC Certified
- Communicating this policy to all employees, clients, contractors and suppliers and raising environmental awareness with employees, through initial and ongoing training. As well as making this policy available to the public via our website
- Demonstrating continual improvement in environmental performance by setting quantifiable objectives and targets. Progress towards these targets is reported and reviewed at annual management review meetings
- The following objectives and targets:
- To minimise pollution arising from use of company vehicles and reduce unnecessary mileage
- To minimise waste going to landfill and monitor and minimise energy, paper and water consumption, by increasing staff awareness
- To ensure the risk of fire is minimised thereby reducing the risk of air and water pollution arising from fire on site
- To minimise usage of print chemicals which are harmful to the environment and ensure their safe disposal
- Prevention of pollution at our site and from our activities by regularly checking our control procedures for waste disposal are being followed
